# Angular Router

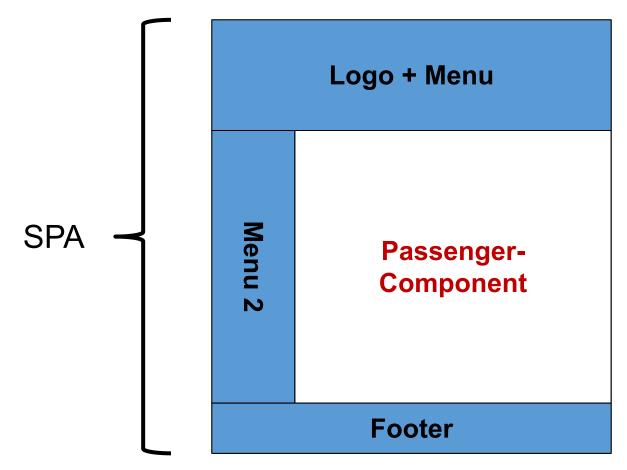

# Routing in Angular

# Routing in Angular

/FlightApp/passenger

# Configuration

```
const APP_ROUTES: Routes = [
        path: 'home',
        component: HomeComponent
    },
        path: 'flight-search',
        component: FlightSearchComponent
    },
        path: '**',
        redirectTo: 'home'
```

# Configuration

```
// app.module.ts
@NgModule({
    imports: [
        BrowserModule,
        HttpModule,
        FormsModule,
        RouterModule.forRoot(ROUTE_CONFIG)
    ],
})
                                  For Root-Module
export class AppModule {
                            For Feature-Module: forChild
```

### AppComponent

```
<a routerLink="/home">Home</a>
<a [routerLink]="variableName">Flight Search</a>
<div>
<router-outlet></router-outlet>
</div>
```

#### Parameters

- passenger/7
- passenger/7?details=true&page=7
- passenger/7;details=true;page=7
- passenger/7;details=true;page=7/flights

#### Parameters

```
const APP_ROUTES: Routes = [
    [...]
        path: 'flight-search',
        component: FlightSearchComponent
    },
        path: 'flight-edit/:id',
        component: FlightEditComponent
```

# Reading Parameters

```
export class FlightEditComponent {
    public id: string;
    constructor(
       private route: ActivatedRoute) {
        route.params.subscribe(
            p => {
                this.id = p['id'];
                [...]
```

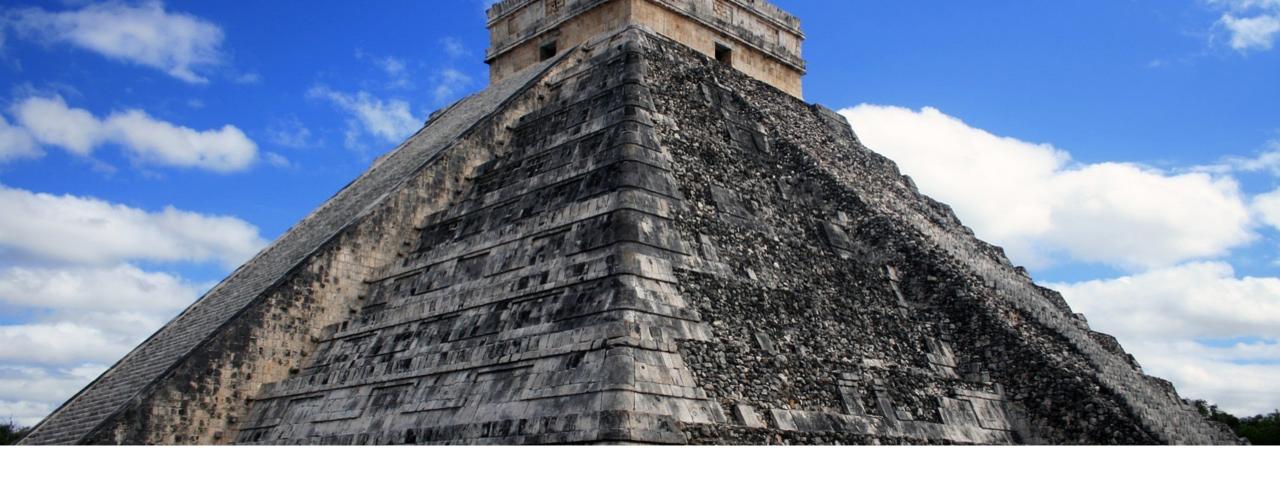

#### Links for Routes with Parameters

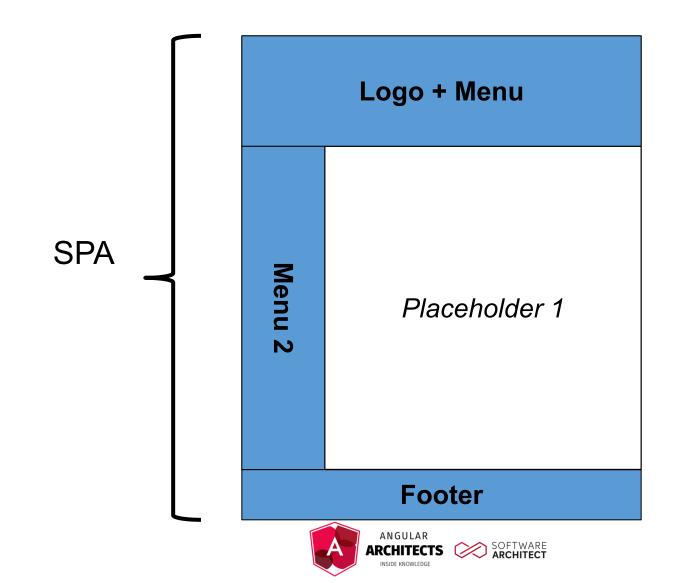

```
<a [routerLink]="['/flight-edit', flight.id, {showDetails: true}]">Edit</a>
```

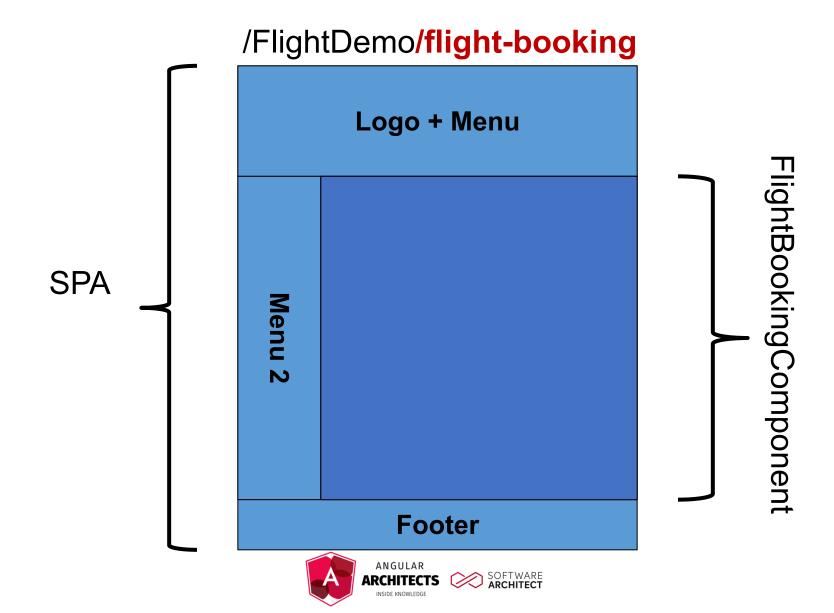

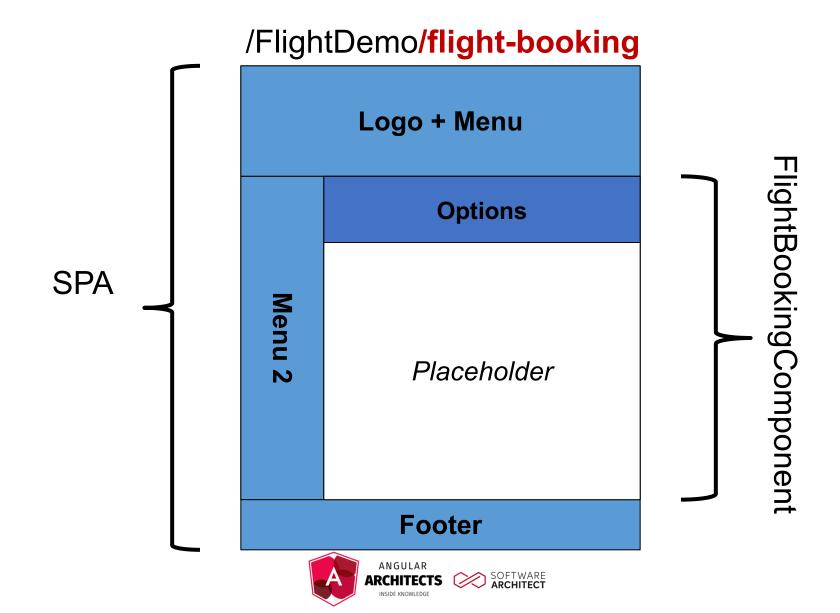

# DEMO

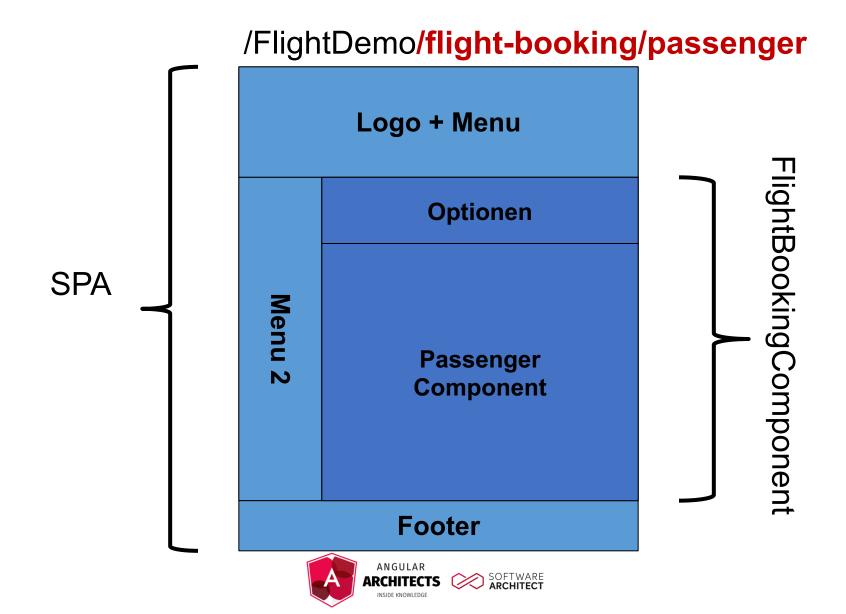

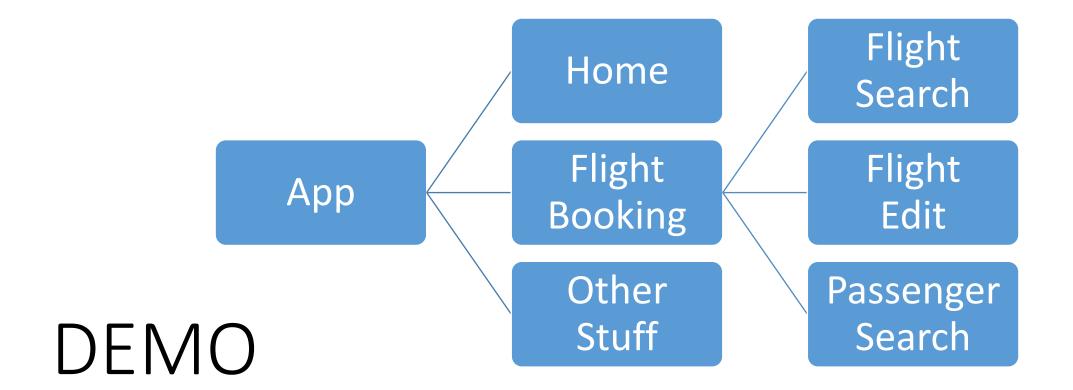

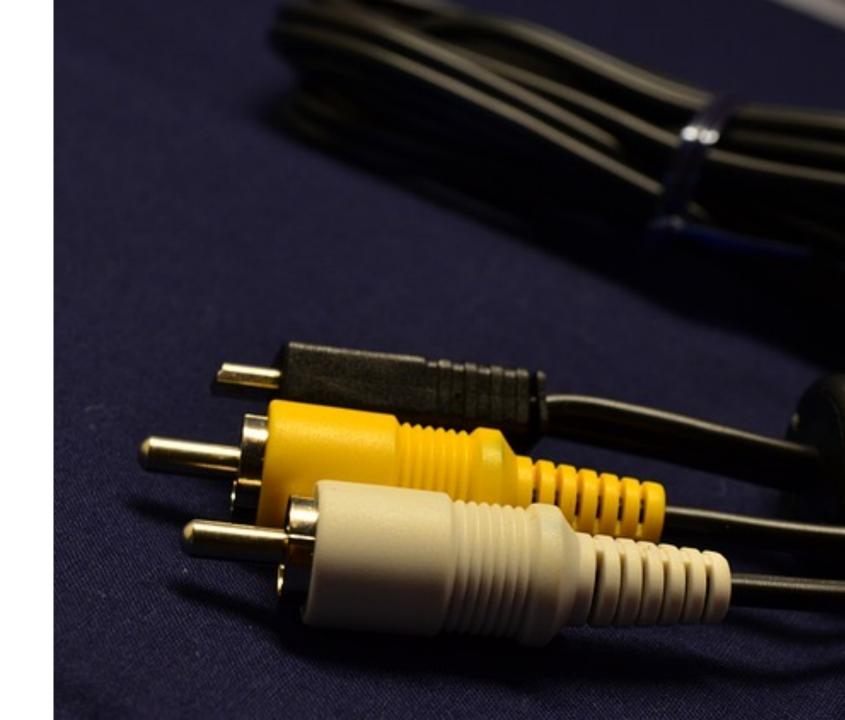

# Configuration

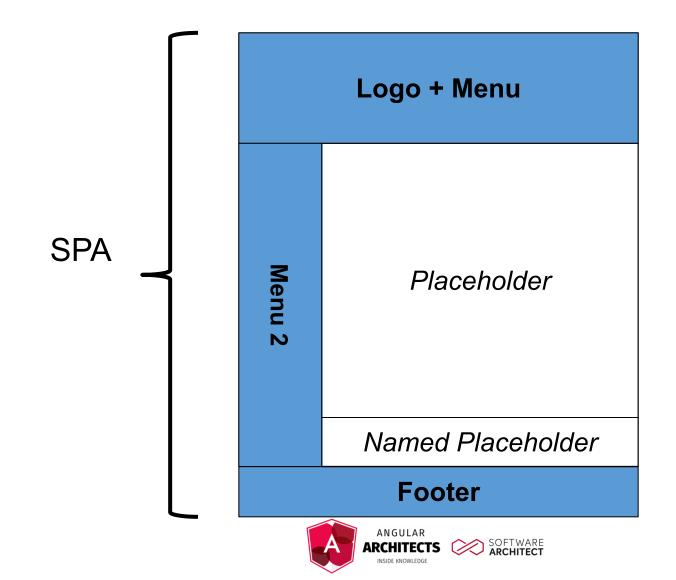

```
const APP_ROUTES: Routes = [
        path: '',
        component: HomeComponent
    },
        path: 'flight-booking',
        component: FlightBookingComponent,
        children: [
                path: 'flight-search',
                component: FlightSearchComponent
            },
            [...]
```

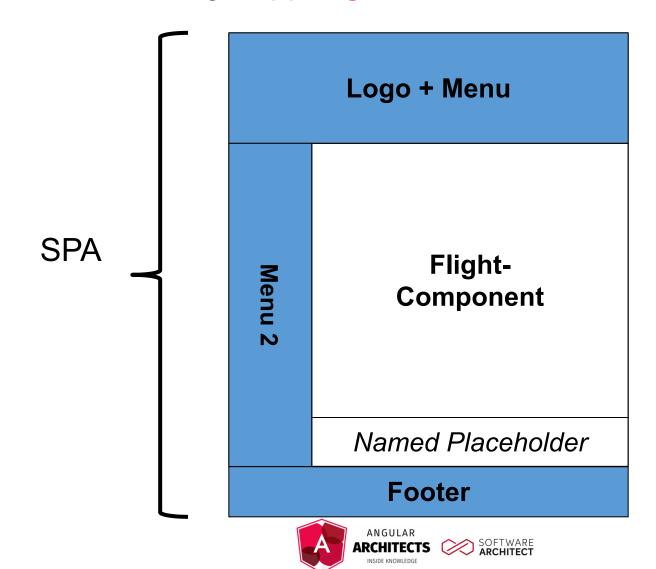

**Aux Routes** 

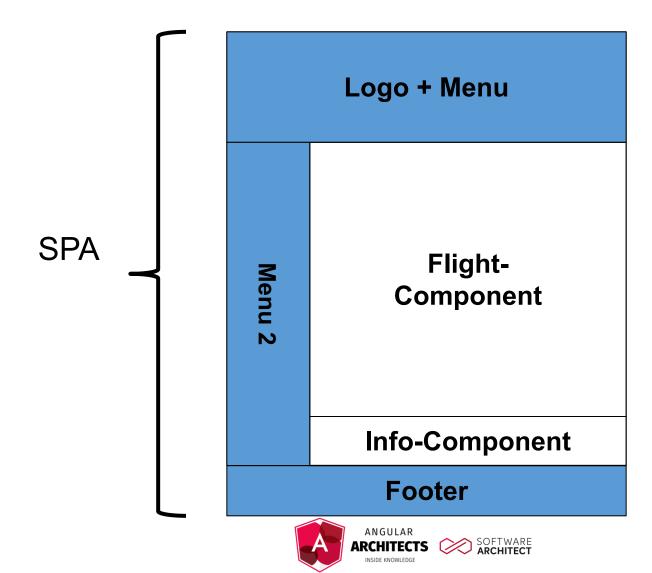

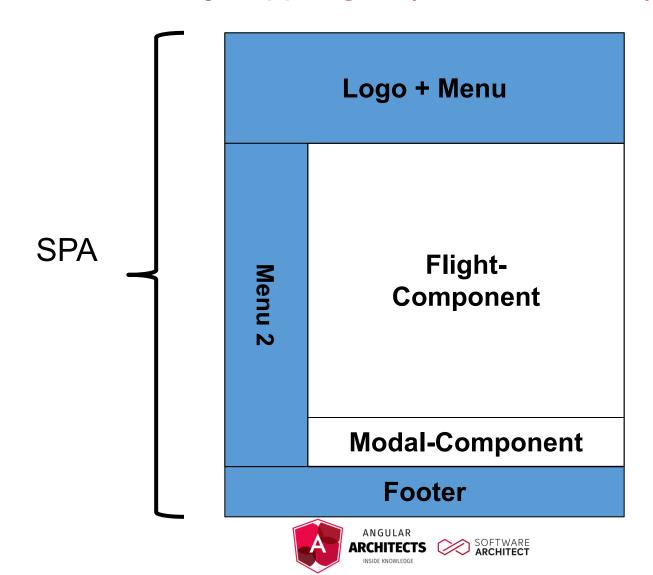

#### /FlightApp/flights

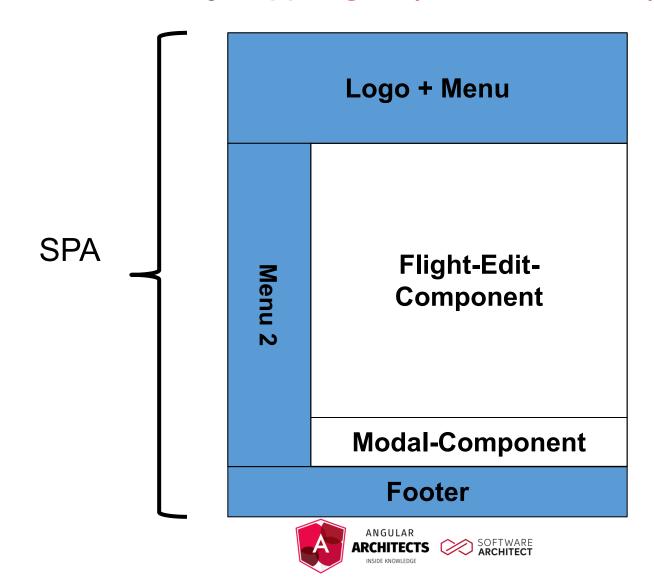

/FlightApp/flights(aux:info)

/FlightApp/flights(aux:info/modal)

#### /FlightApp/flights(aux:info/modal)/edit/17

#### Use Cases

- Partly autonomous parts of an application
- "Norton Commander Style"
- (CSS-based) Popups and Modals

#### **Define Outlets**

-- Default Name: primary

```
<router-outlet><router-outlet name="aux">
```

# Configuration

```
export const ROUTE_CONFIG: Routes = [
        path: 'home',
        component: HomeComponent
    },
        path: 'info',
        component: InfoComponent,
        outlet: 'aux'
    },
        path: 'dashboard',
        component: DashboardComponent,
        outlet: 'aux'
```

# Activating Aux-Routes

```
<a [routerLink]="[{outlets: { aux: 'info' }}]">
    Activate Info
</a>
<a [routerLink]="[{outlets: { aux: null }}]">
    Deactivate Info
</a></a>
```

### Activating Several Aux Routes at Once

```
<a [routerLink]="[{outlets: {</pre>
                       aux: 'basket',
                       primary: 'flight-booking/flight-search' }}]"> ... </a></a>
<a [routerLink]="[{outlets: { aux: 'basket',</pre>
                       primary: ['flight-booking', 'flight-search'] }}]"> ... </a>
<a [routerLink]="[{outlets: { aux: 'basket',</pre>
                       primary: ['flight-booking', 'flight-edit', 17] }}]"> ... </a>
```

### Code-based Routing

```
export class AppComponent {
    constructor(private router: Router) {}
    activateInfo(): void {
        this.router.navigate([{outlets: { aux: 'info' }}]);
   deactivateInfo(): void {
        this.router.navigate([{outlets: { aux: null }}]);
```

# DEMO

# Lab

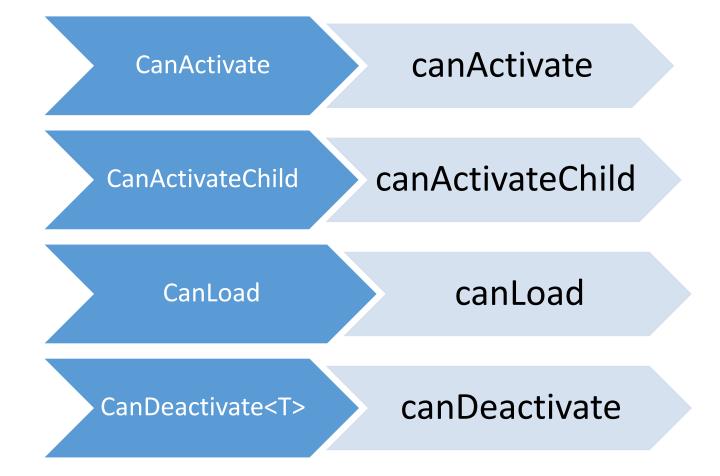

# Guards

#### What are Guard?

- Services
- Can prevent the Activation or Deactivation of a Route

### Guards

Result: boolean | Observable<br/>
boolean> | Promise<br/>
boolean>

## Guards and the Router Configuration

```
const APP_ROUTES: Routes = [
        path: '/flight-booking',
        component: FlightBookingComponent,
        canActivate: [AuthGuard],
        children: [
                 path: 'flight-edit/:id',
                 component: FlightEditComponent,
                 canDeactivate: [FlightEditGuard]
             },
             \lceil ... \rceil
```

### Provider for Guards

```
// app.module.ts
@NgModule({
    providers: [
        FlightEditGuard,
        AuthGuard
    ],
    [...]
})
export class AppModule {
}
```

# DEMO

# Resolver

### What are Resolver?

- Services
- Are activated when the Router switches over to another route
- Can load needed data
- Postpone activation of target route until data is loaded
- Meanwhile, a loading indicator can be shown

### Resolver

```
@Injectable()
export class FlightResolver implements Resolve<Flight>
    constructor(private flightService: FlightService) {
    resolve(route, state):
           Observable<Flight> | Promise<Flight> | any {
        return [...]
```

## Register Resolver

```
const FLIGHT_BOOKING_ROUTES: Routes = [
   [...]
       path: 'flight-edit/:id',
       component: FlightEditComponent,
       resolve: {
           flight: FlightResolver *---- Token
```

## Receive Data in Component

```
@Component({ ... })
export class FlightEditComponent {
    flight: Flight;
    constructor(private route: ActivatedRoute) { }
    ngOnInit() {
        this.route.data.subscribe(
            data => {
                this.flight = data['flight'];
        );
```

# Lab

Lazy Loading

### Module Structure

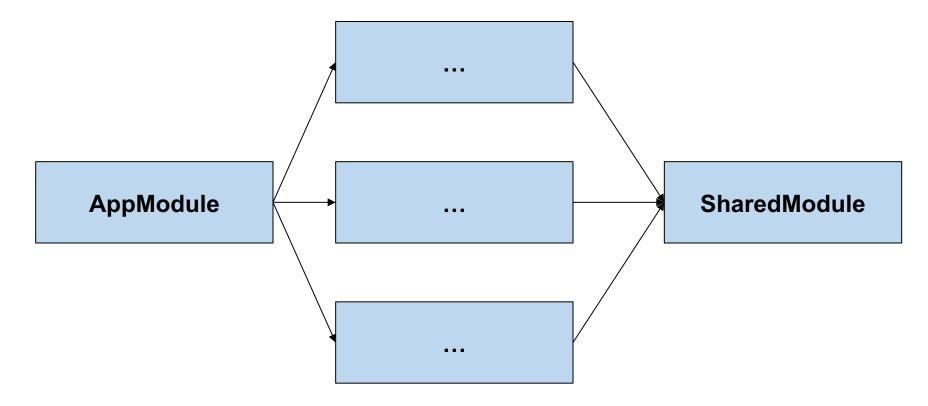

**Root Module** 

**Feature Modules** 

**Shared Module** 

## Lazy Loading

**Root Module** 

**Feature Modules** 

**Shared Module** 

## Root Module with Lazy Loading

```
const APP_ROUTE_CONFIG: Routes = [
        path: 'home',
        component: HomeComponent
    },
        path: 'flights',
        loadChildren: () => import('./[...]/flight-booking.module')
                                  .then(m => m.FlightBookingModule)
];
```

### Routes for Feature Module

### Routes for Feature Module

```
const FLIGHT_ROUTES =
        path: '/bookings',
        component: FlightBookingComponent,
                          Url: /flights/bookings
          Triggers Lazy Loading
Page ■ 56
```

# DEMO

Preloading

### Idea

- Modules that might be needed later are loaded after (!) the start of the application
- When the module is actually needed, it is available immediately

## Activating Preloading

# DEMO
